**Exhibition Preview Release**  
**Stand no: RO51**

**Foodex Meatex**  
**NEC**  
**21 – 24 March 2010**

### **FORTRESS TECHNOLOGY TO SHOW VECTOR INTEGRATED CONVEYOR SYSTEM ENHANCED TO MEET NEW RETAILER STANDARDS**

Fortress Technology will be highlighting its extensive range of Phantom metal detectors for the food industry. On display will be the company's latest Vector Integrated Conveyor System which has been recently enhanced to meet new supermarket retailer standards. For example, it now features an alarm – either audible or visual - to indicate when there has been metal rejects in order to help identify potential issues early.

Fully compliant with British Retail Consortium (BRC) and English European Food Safety Inspection Service (EFSIS) specifications, the Fortress Technology Vector conveyor system is a convenient and effective all-in-one solution developed to achieve the most accurate detection results by optimising the performance of Phantom metal detectors.

Purpose built to integrate with standard rectangular aperture metal detectors, the Vector conveyor offers reliable performance under the harshest production environments including washdown. Easy to clean and maintain, the machine features a fully modular design and is robustly constructed to industrial specifications using a stainless steel frame.

A wide range of belt sizes are offered in standard or heavy duty configurations. Available with a choice of reject options, including Alarm & Stop, Air Blast, Pusher, Divert / Sweep and Retracting Band, the Vector can also be custom-designed and configured by Fortress Technology to meet customers' specific application requirements.

Fortress Technology's Phantom metal detectors are exceptionally reliable yet easy to operate and maintain. Utilising the latest Digital Signal Processing (DSP) technology to ensure complete product integrity, the systems offer superior accuracy and speed. They are available in a wide range of aperture sizes with a selection of construction options including painted aluminum, stainless steel and BSH (IP69K certified).

As well as the food industry, Fortress Technology designs and manufactures metal detectors for the pharmaceutical, lumber, plastics and textiles markets. In addition to supplying a series of standard models, the company can custom-build machines to suit non standard applications.
